

Oferta Pune

<https://github.com/mendi926/oferta-pune>

- Application for browsing the latest employment ads.

- Components:

SQLite database for storing items. AsyncTaskLoader used for doing queries.

SuperListView library for Swipe to Refresh and Load More gestures. Data feed from Cursor.

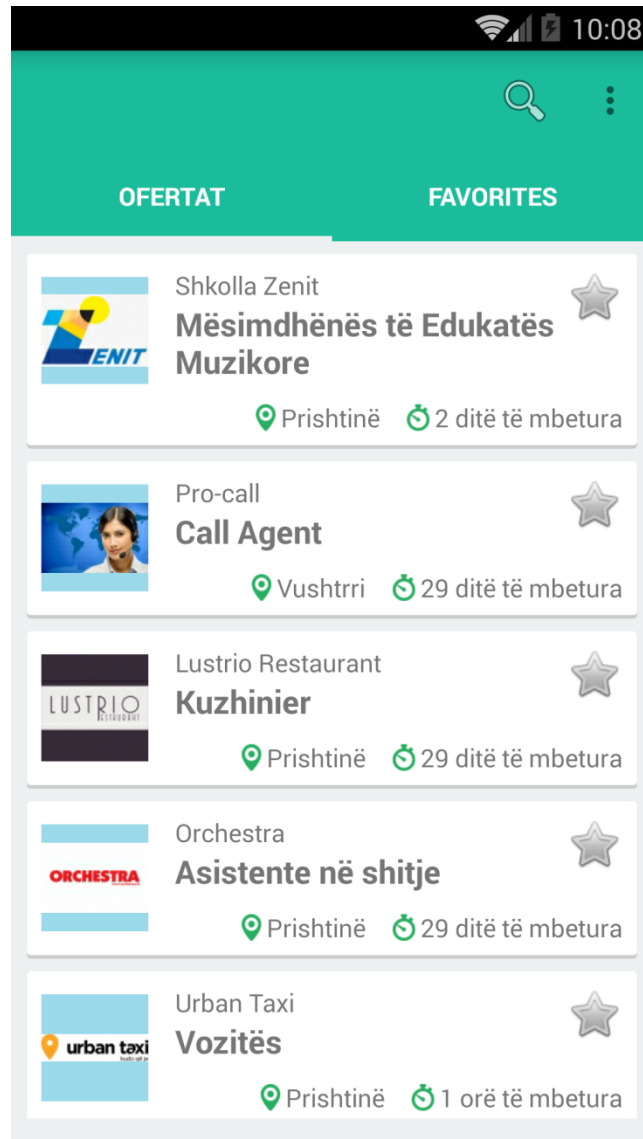

Volley library for receiving JSON response from webserver

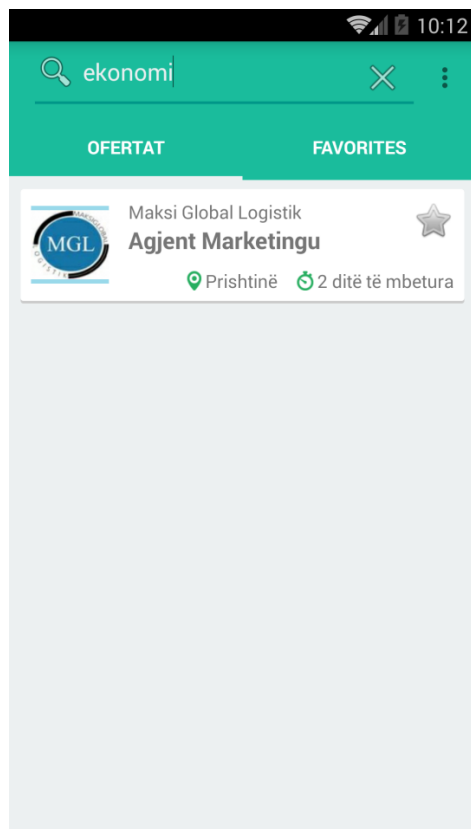

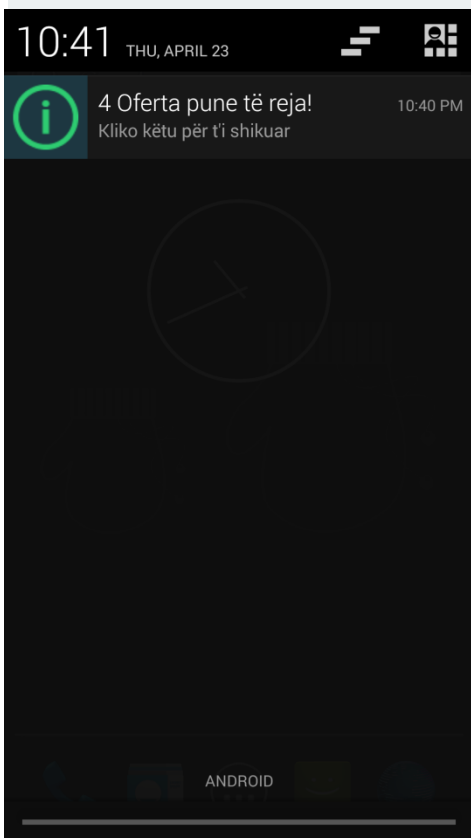

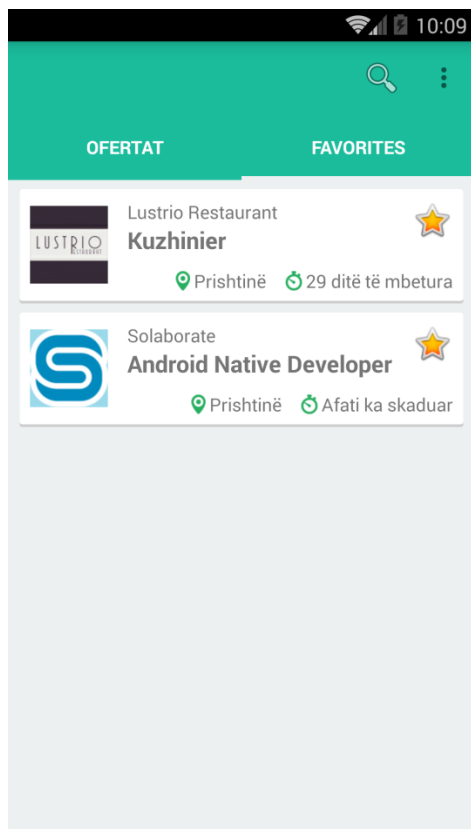

ViewPager for swiping through items. Data feed from cursor adapter extending PagerAdapter.

Custom HandlerThread subclass for handling downloading of image views. Lrucache used for temporary storing of them.

Service working with BroadcastIntent for notifying users when new items are available.

I still haven't decided on a logo.

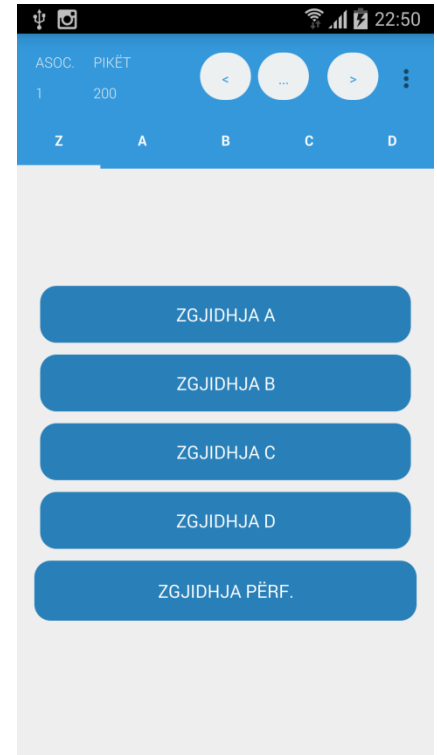

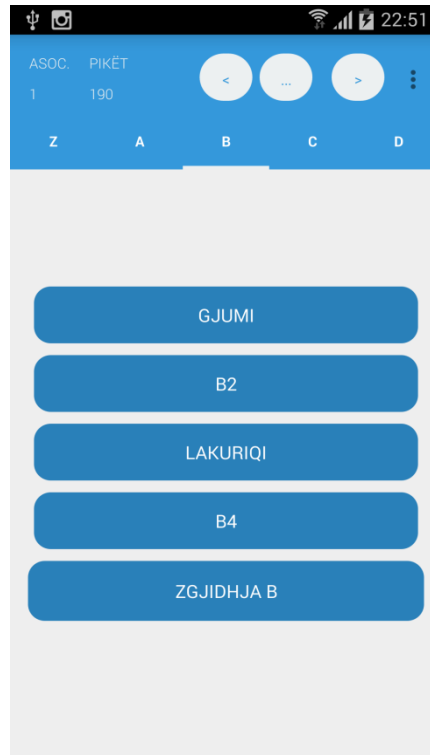

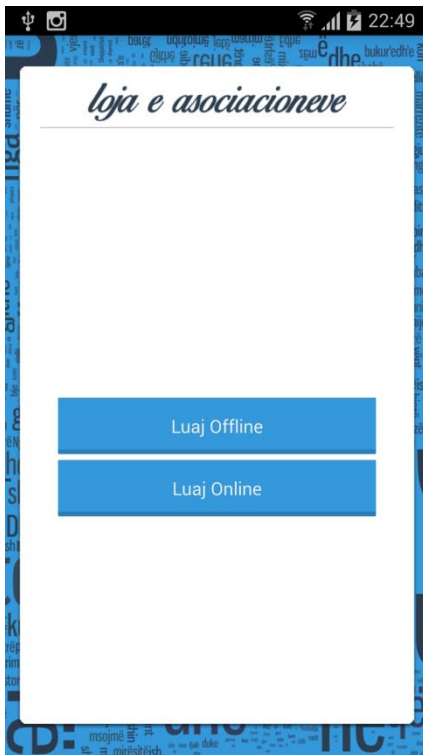

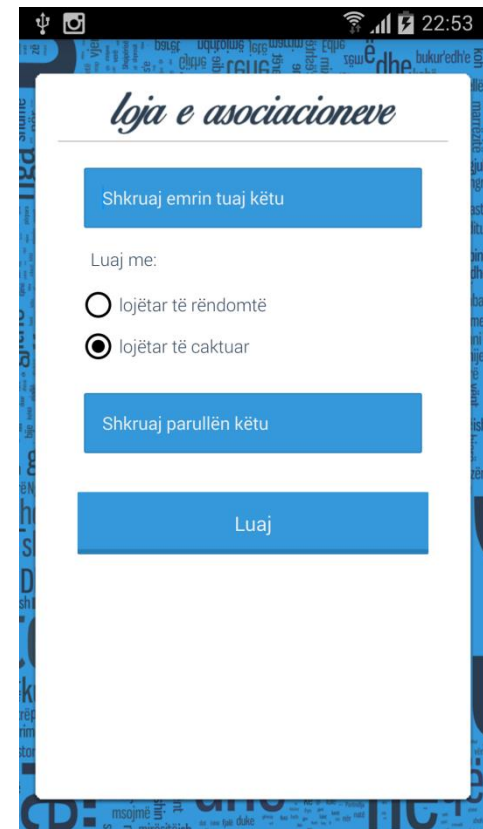

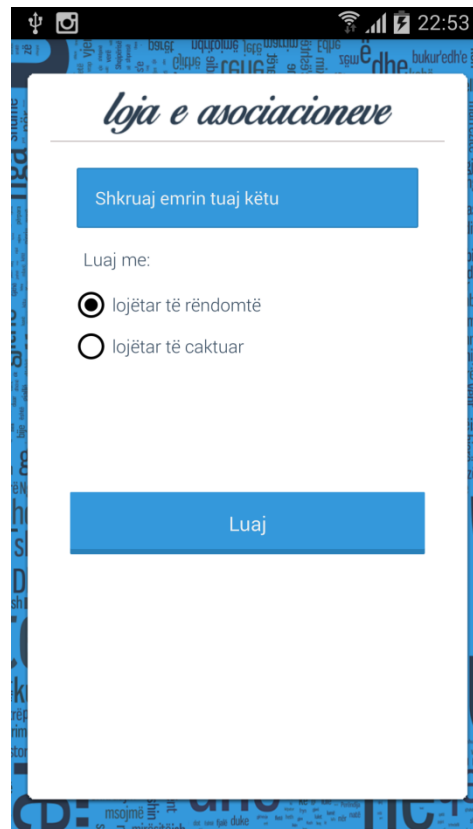

Loja e asociacioneve

<https://github.com/mendi926/loja-e-asoc>

Find the association between words to arrive at the final correct answer. Inspired from the tv late night show "Oxygen".

Offline mode

PushUps Reminder

<http://www.amazon.com/dp/B00UXM3OM6>

is a simple app that reminds you to do pushups. You're lazy and you know it, so if an app tells you to do pushups every 30,60 or whatever minutes, you're eventually going to do some pushups.

This is my first app. I published this on Amazon.com after completing their Android Development course.
